

How to Set Up Jupyter Notebook (Windows, macOS, Linux)

This guide explains **how to install and run Jupyter Notebook** step by step. It is beginner-friendly and works across **Windows, macOS, and Linux**.

Prerequisite: Python Installed

Before installing Jupyter Notebook, ensure Python is installed.

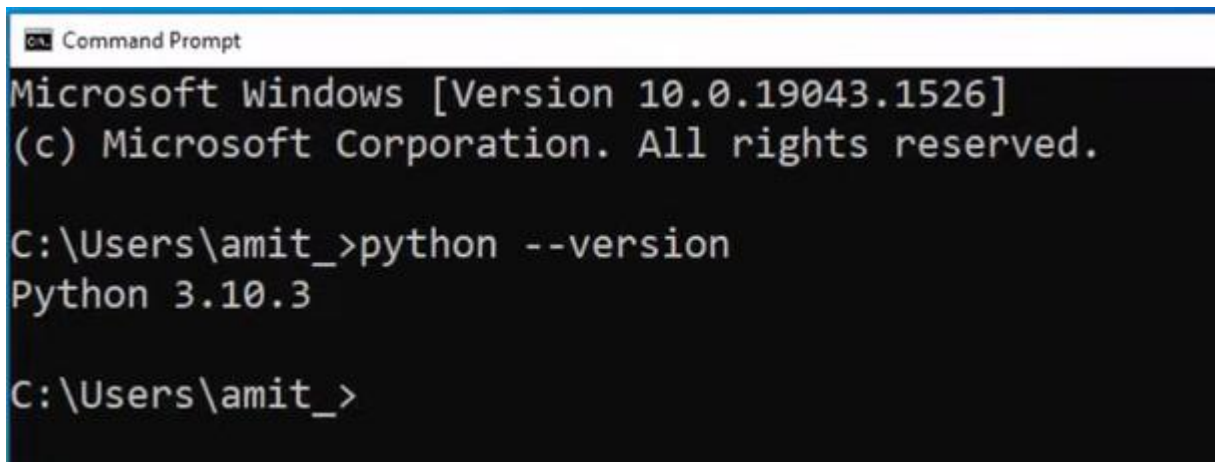

Verify Python

Windows

```
python --version
```

macOS / Linux

```
python3 --version
```

```
Command Prompt
Microsoft Windows [Version 10.0.19043.1526]
(c) Microsoft Corporation. All rights reserved.

C:\Users\amit_>python --version
Python 3.10.3

C:\Users\amit_>
```

Step 1: Install Jupyter Notebook Using pip

Windows

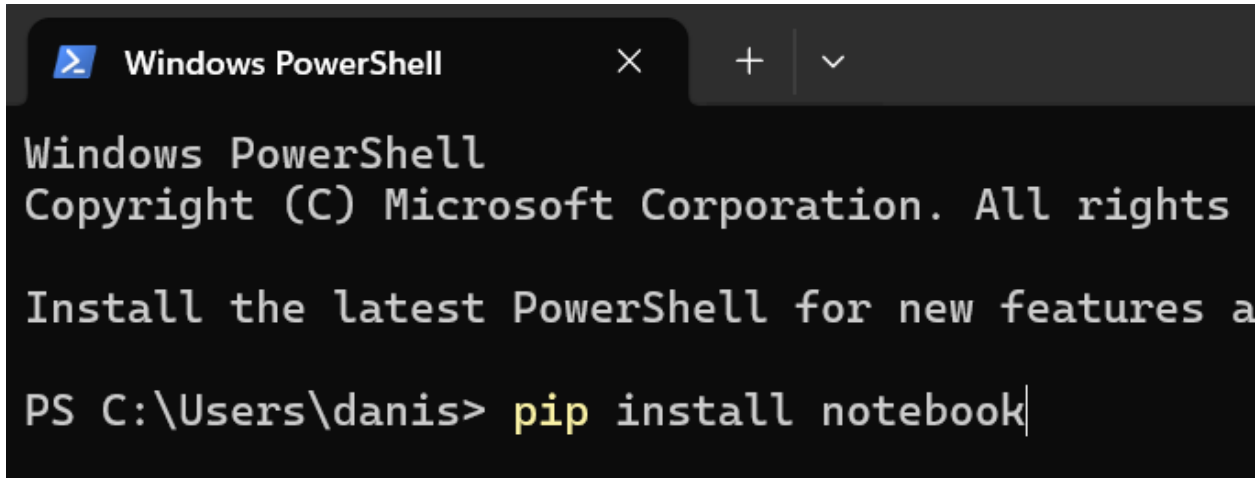

Open **Command Prompt** and run:

```
pip install notebook
```

macOS / Linux

Open **Terminal** and run:

```
pip3 install notebook
```

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and enhancements!
http://aka.ms/pscorex3

PS C:\Users\danis> pip install notebook
```

Step 2: Verify Jupyter Installation

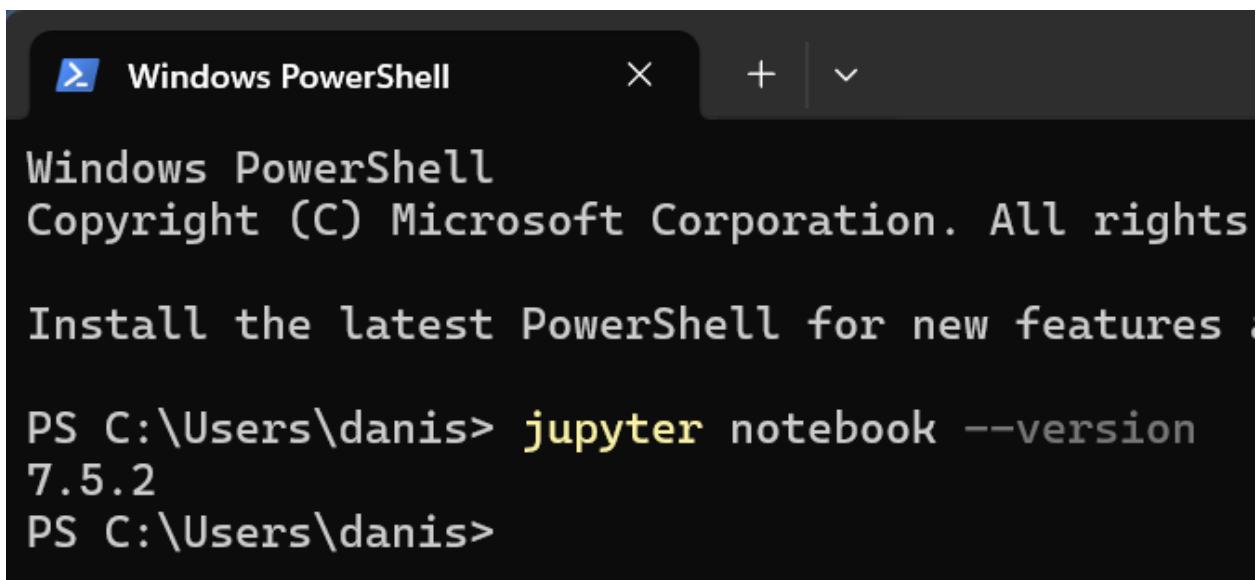

Run the following command:

Windows

```
jupyter notebook --version
```

macOS / Linux

```
jupyter notebook --version
```

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and enhancements!
http://aka.ms/pscorex3

PS C:\Users\danis> jupyter notebook --version
7.5.2
PS C:\Users\danis>
```

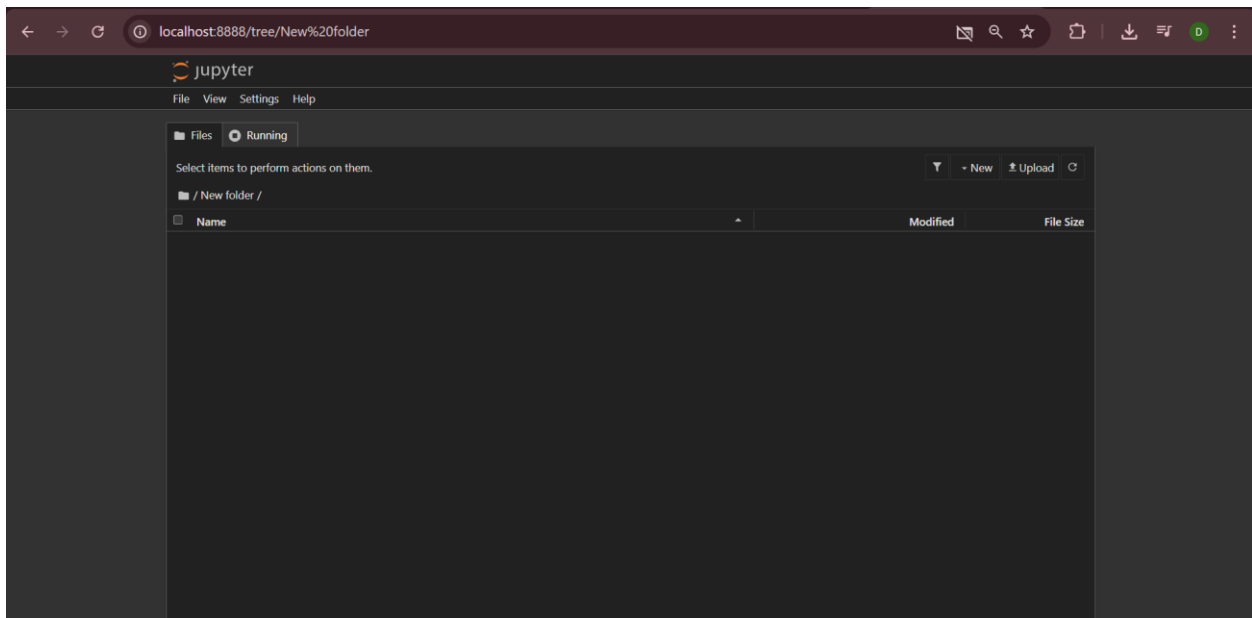

Step 3: Launch Jupyter Notebook

Run:

`jupyter notebook`

This will: - Start a local server - Automatically open Jupyter in your browser

```
PS C:\Users\danis> jupyter notebook

[I 2026-01-24 10:52:36.995 ServerApp] Serving notebooks from local directory: C:\Users\danis
[I 2026-01-24 10:52:36.996 ServerApp] Jupyter Server 2.17.0 is running at:
[I 2026-01-24 10:52:36.996 ServerApp] http://localhost:8888/tree?token=8deee40262107ae2d69e2a583a8ee203822c8f5e61961849
[I 2026-01-24 10:52:36.996 ServerApp] http://127.0.0.1:8888/tree?token=8deee40262107ae2d69e2a583a8ee203822c8f5e61961849
[I 2026-01-24 10:52:36.997 ServerApp] Use Control-C to stop this server and shut down all kernels (twice to skip confirm
ation).
```

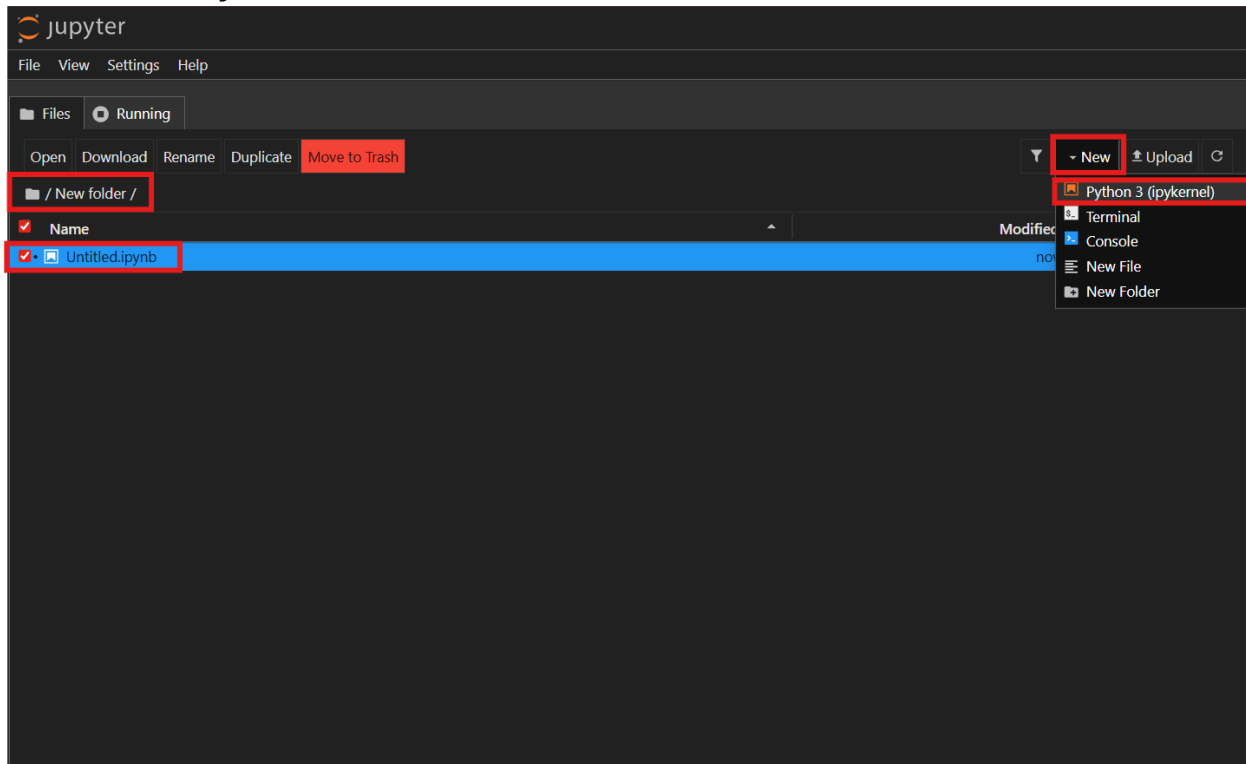

Step 4: Understand the Jupyter Interface

Key parts: - **Files tab**: Your project directory - **New button**: Create notebooks - **Running tab**: Active notebooks

Step 5: Create a New Notebook

1. Click **New** (top-right).
2. Select **Python 3**.

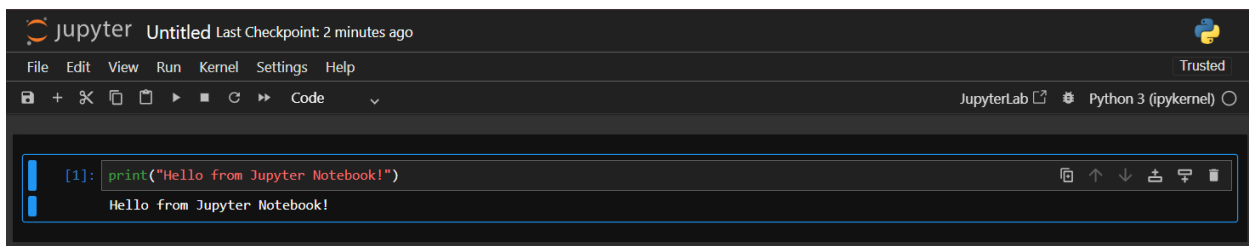

Step 6: Write Your First Code Cell

Type the following in the first cell:

```
print("Hello from Jupyter Notebook!")
```

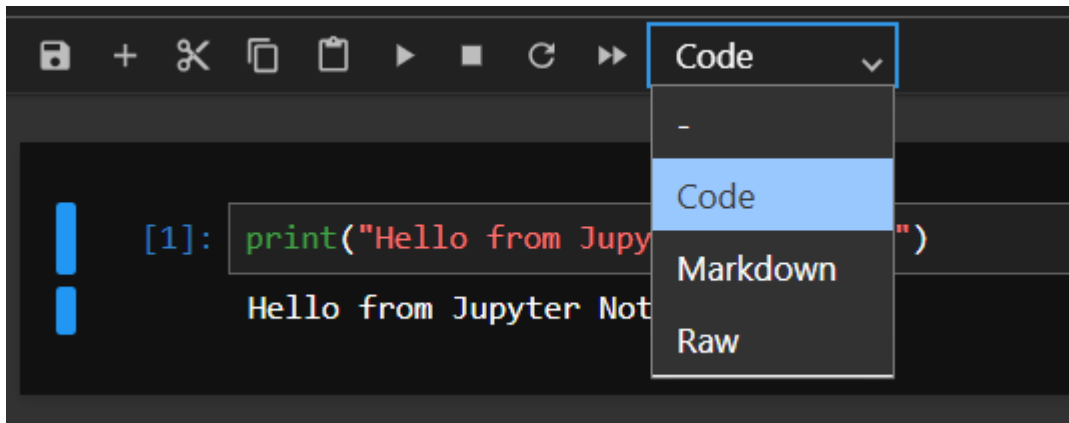

Press **Shift + Enter** to run the cell.

Step 7: Understand Cells

- **Code Cell** → Runs Python code
- **Markdown Cell** → Documentation and notes

To change cell type: - Use the dropdown menu (Code / Markdown)

Step 8: Stop Jupyter Notebook

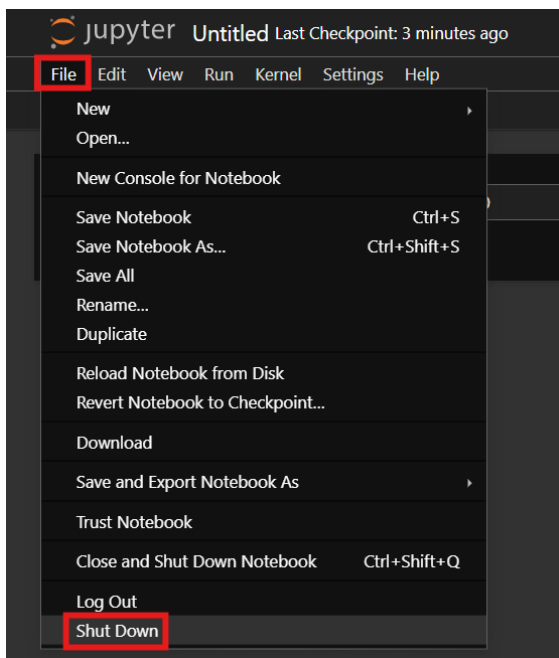

Method 1: From Terminal

Press:

Ctrl + C

Method 2: From Browser

- Click **File** → **Shutdown**

✓ Setup Complete

You have successfully: - Installed Jupyter Notebook - Launched it in a browser - Created and executed a notebook ☐
