

VS Code + Python Setup Guide (Windows)

This beginner-friendly guide walks you through **installing Python**, **setting up Visual Studio Code**, and **running your first Python program on Windows**.

Step 1: Download Python

Windows

Follow the steps below.

macOS

- Open a browser and go to the official Python website.
- Click **Download Python for macOS**.
- Download the .pkg installer.

Linux

Most Linux distributions come with Python pre-installed.

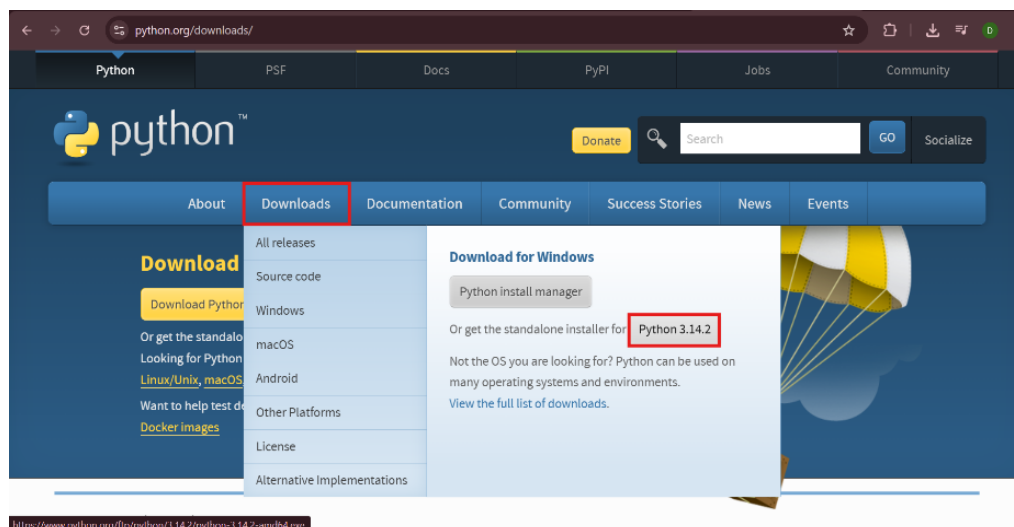

To check, open a terminal and run:

```
python3 --version
```

If Python is not installed: - **Ubuntu / Debian**: `sudo apt update && sudo apt install python3 python3-pip` - **Fedora**: `sudo dnf install python3 python3-pip` - **Arch**: `sudo pacman -S python`

Step 1 (Windows): Download Python

1. Open a web browser.
2. Go to the official Python website.
3. Click **Download Python (Latest Version)**.

Step 2: Run the Python Installer

Windows

1. Open the downloaded .exe file.
2. **IMPORTANT:** Check the box “**Add Python to PATH**”.
3. Click **Install Now**.

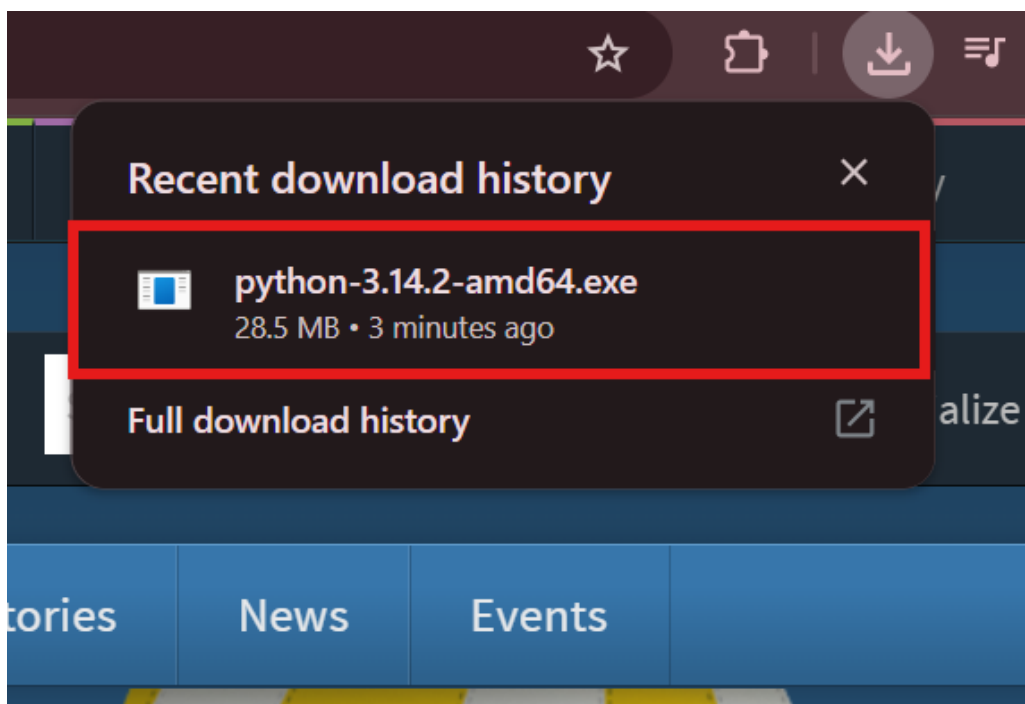

macOS

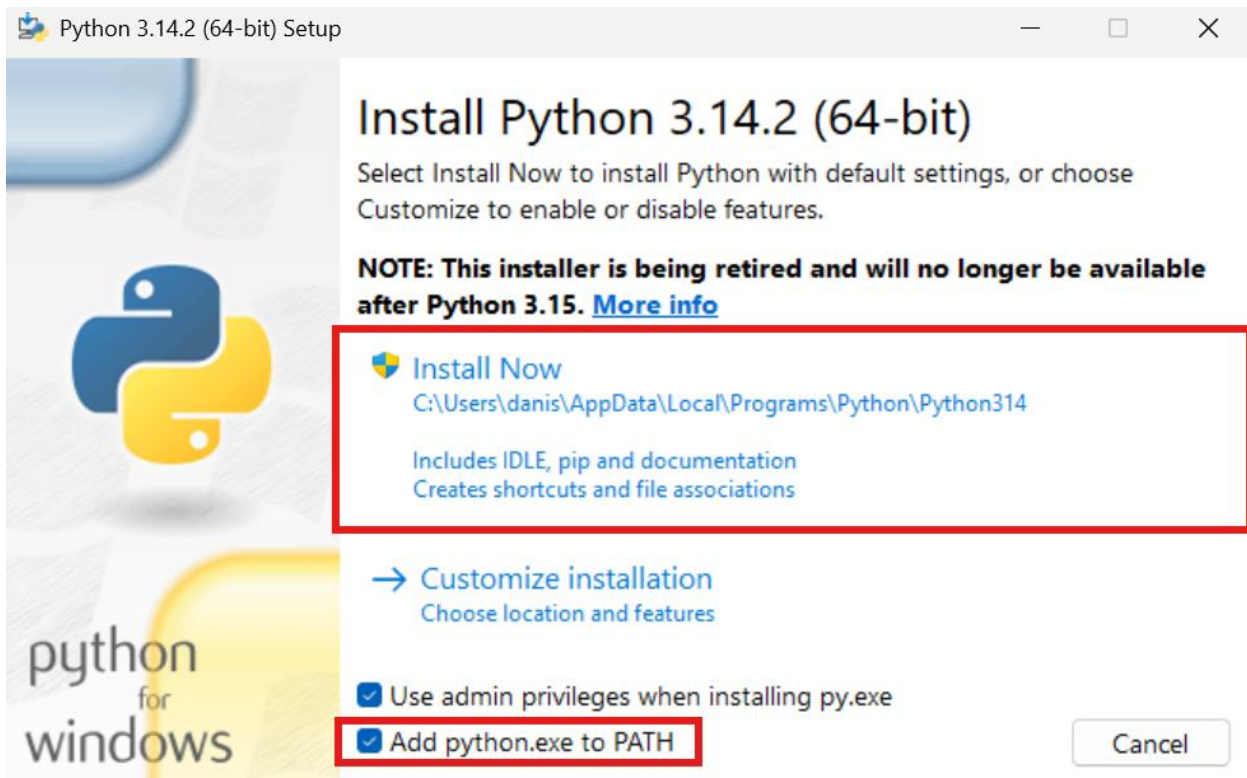

1. Open the downloaded .pkg file.
 2. Click **Continue** through the installer.
 3. Keep default options and complete installation.
- macOS automatically configures PATH.

Linux

Python installed via package manager is automatically added to PATH.

1. Open the downloaded .exe file.
2. **IMPORTANT:** Check the box “**Add Python to PATH**”.
3. Click **Install Now**.

Step 3: Verify Python Installation

Windows

1. Press **Windows + R**, type `cmd`, press Enter.
2. Run:

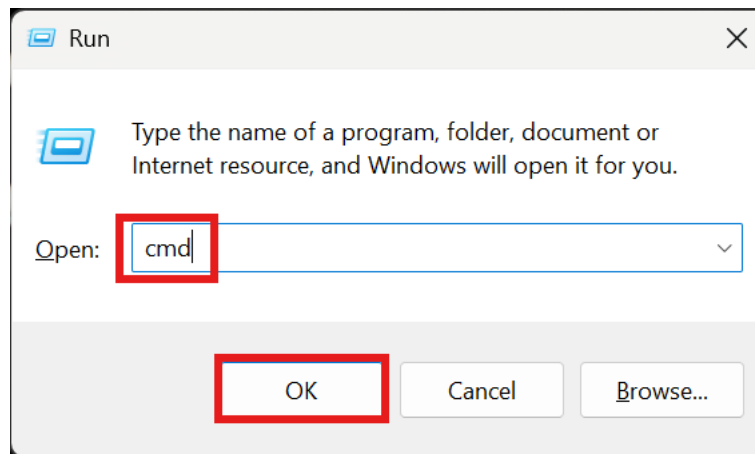

```
python --version
```

macOS / Linux

1. Open **Terminal**.
 2. Run:
- ```
python3 --version
```
3. Press **Windows + R**, type `cmd`, press Enter.
  4. In Command Prompt, type:

```
python --version
```

5. A Python version number should appear.

```
Command Prompt
Microsoft Windows [Version 10.0.19043.1526]
(c) Microsoft Corporation. All rights reserved.

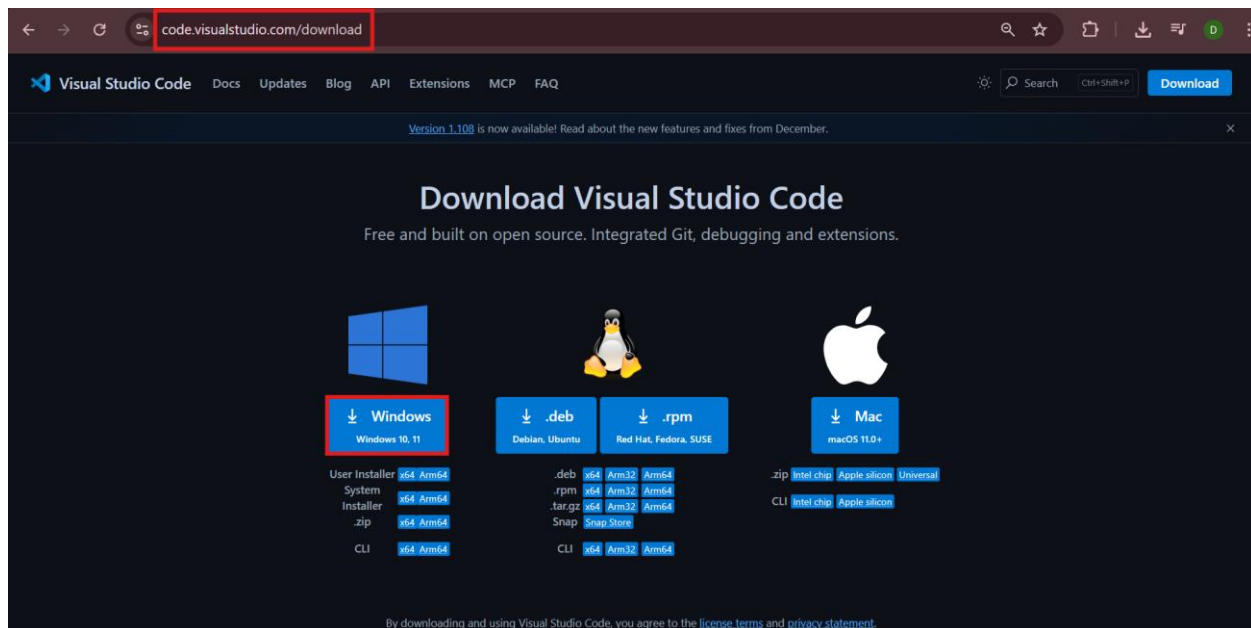

C:\Users\amit_>python --version
Python 3.10.3

C:\Users\amit_>
```

## Step 4: Download Visual Studio Code

### Windows

1. Open your browser.
2. Go to the official VS Code website.
3. Click **Download for Windows**.

## macOS

- Click **Download for macOS**.
- Download the .zip file.

## Linux

- Download .deb or .rpm based on your distro
- Or install via terminal (Ubuntu):

```
sudo apt install code
```

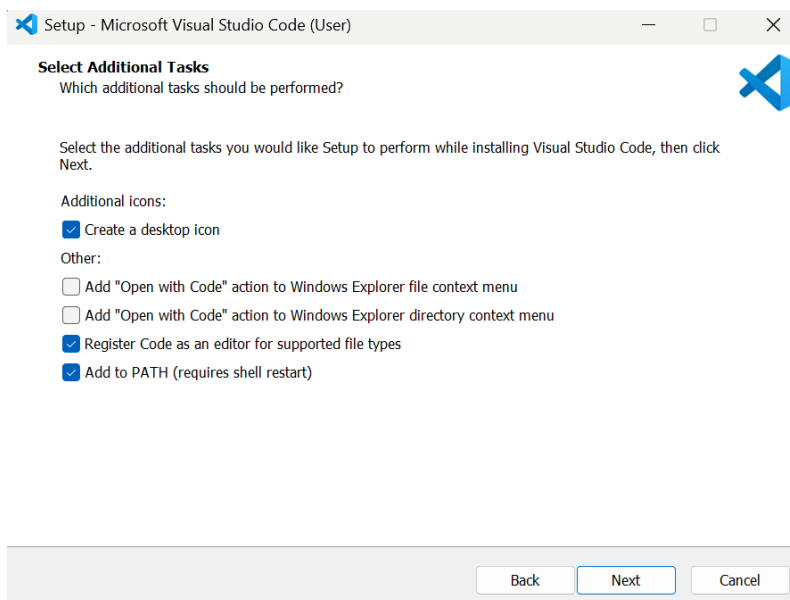

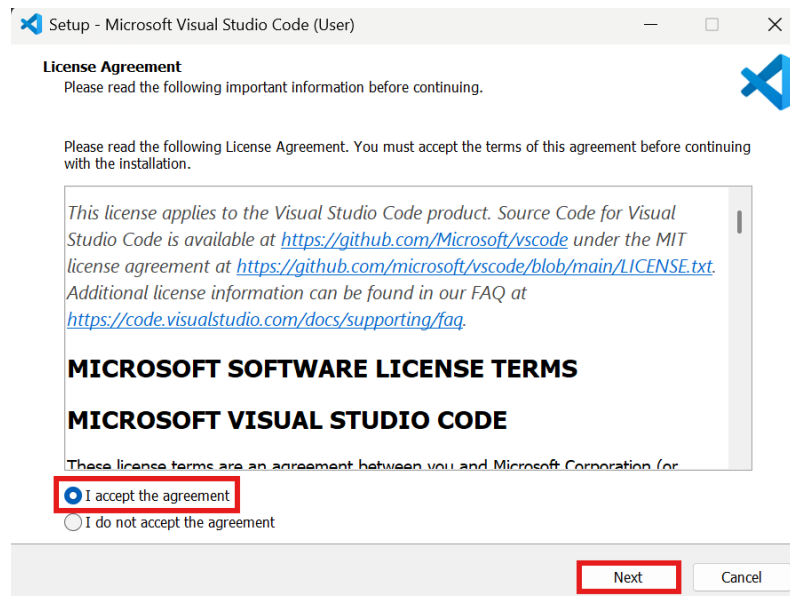

1. Open your browser.
2. Go to the official VS Code website.
3. Click **Download for Windows**.

## Step 5: Install Visual Studio Code

### Windows

1. Run the downloaded VS Code installer.
2. Accept the license agreement.
3. Keep default options selected.

#### 4. Click **Install**.

## macOS

1. Extract the downloaded .zip.
2. Drag **Visual Studio Code.app** into **Applications** folder.

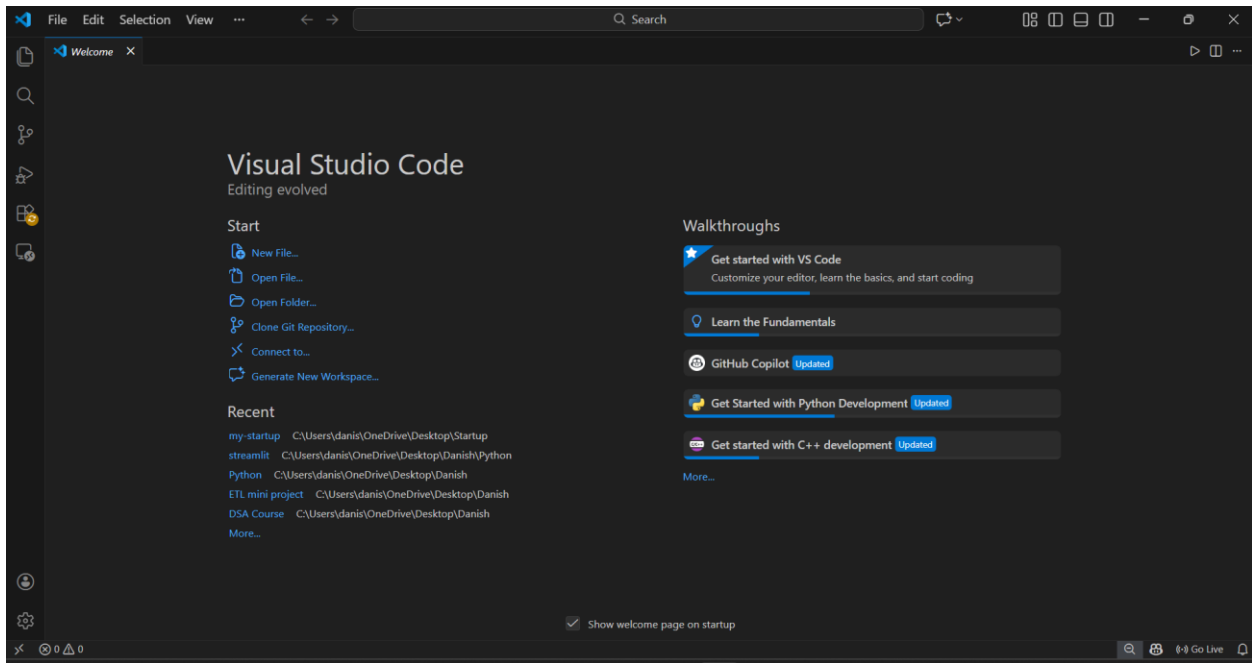

## Linux

- Install using your package manager or downloaded file.
1. Run the downloaded VS Code installer.
  2. Accept the license agreement.

3. Keep default options selected.
4. Click **Install**.

## Step 6: Open VS Code

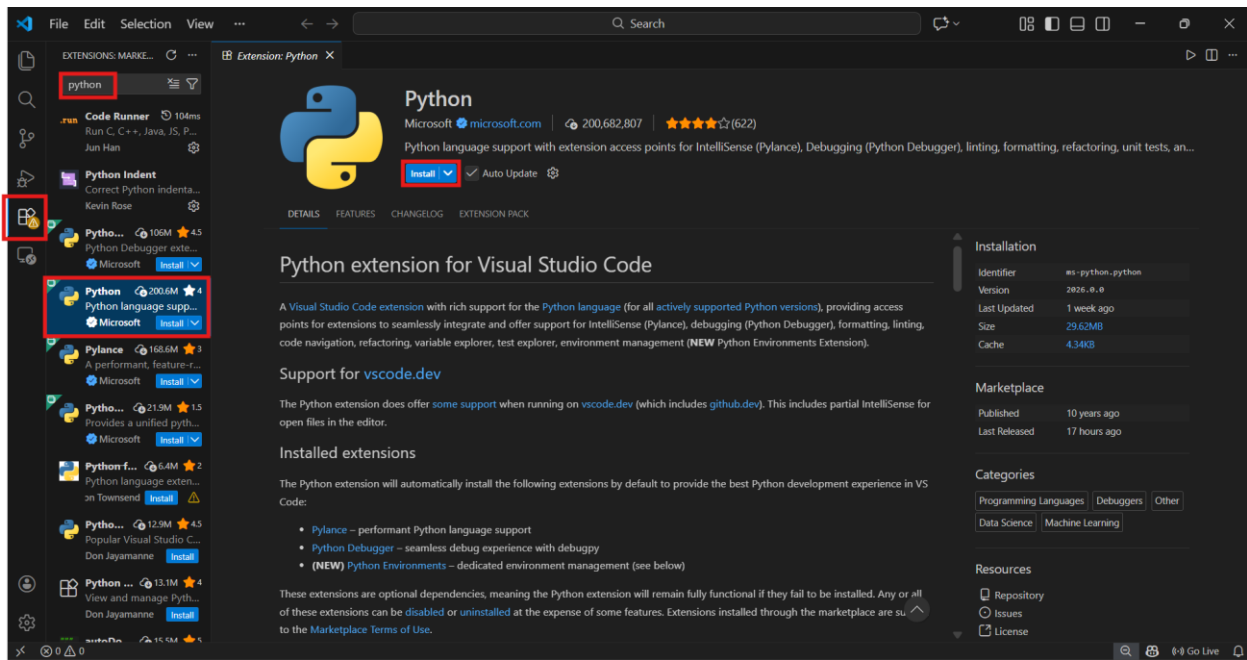

1. Launch **Visual Studio Code** from Start Menu.
2. You should see the welcome screen.

---

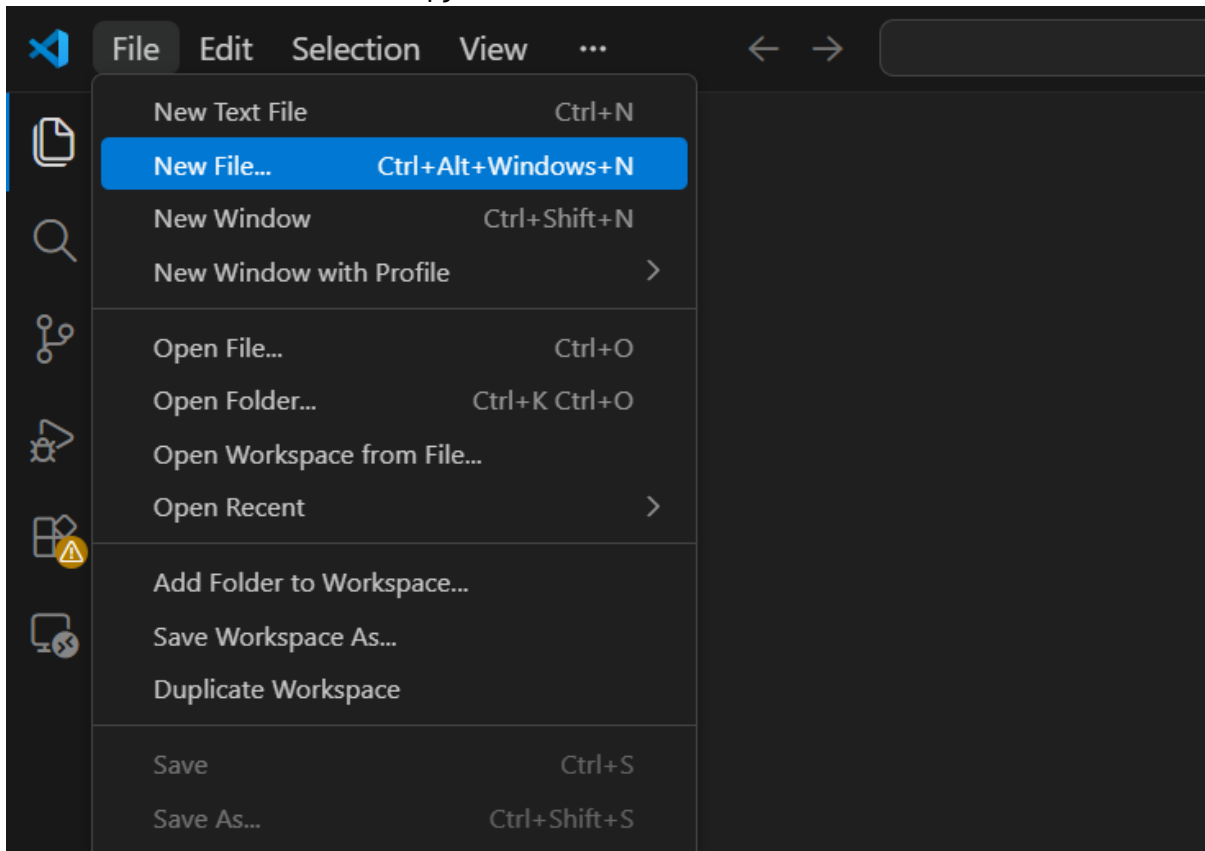

## Step 7: Install Python Extension in VS Code

1. Click the **Extensions** icon on the left sidebar.
2. Search for **Python**.
3. Install the extension published by **Microsoft**.

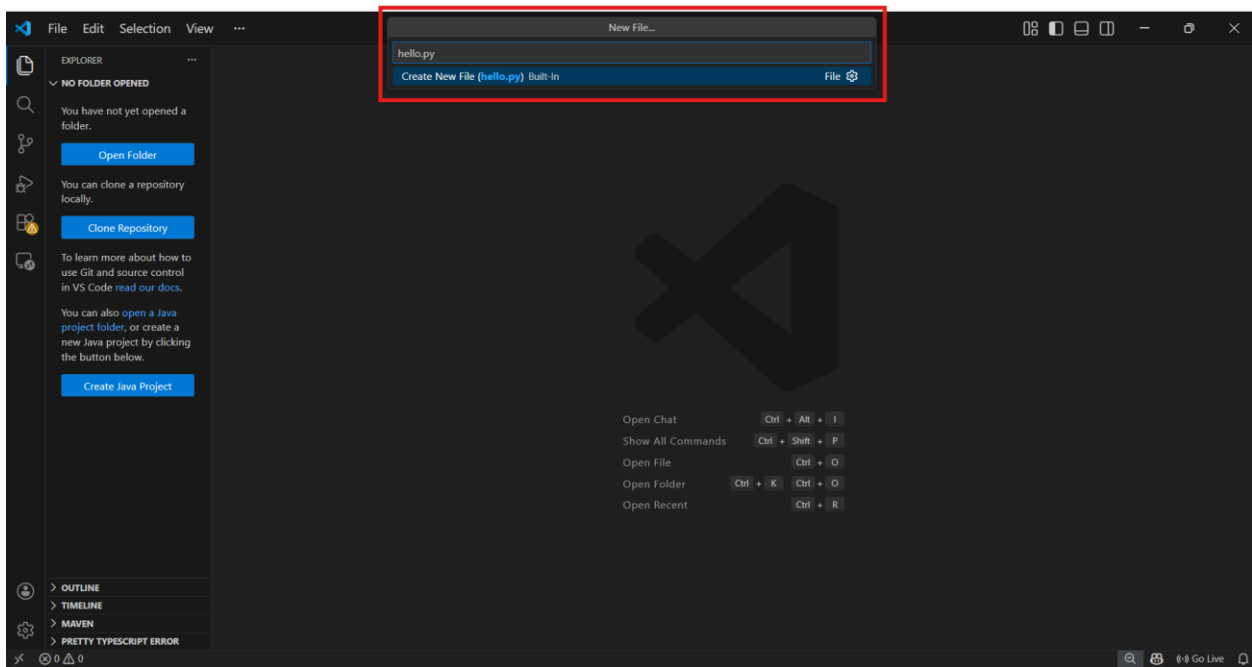

## Step 8: Create a Python File

1. Click **File** → **New File**.
2. Save the file as `hello.py`.

---

## Step 9: Write Your First Python Program

In `hello.py`, type:

```
print("Hello, World!")
```

## Step 10: Run the Python Program

### Method 1: Using Run Button (All OS)

1. Click the **Run**  **button** at the top right.

### Method 2: Using Terminal

*Windows*

```
python hello.py
```

*macOS / Linux*

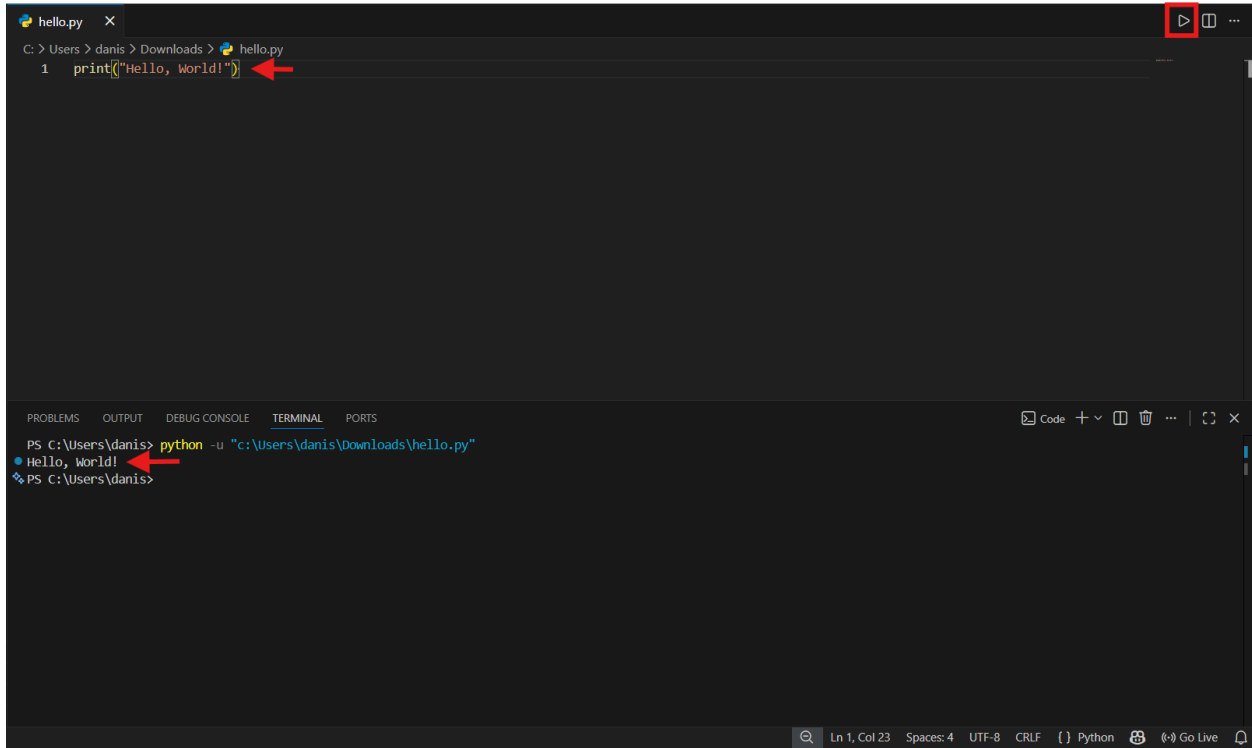

```
python3 hello.py
```

---

## Step 11: Verify Output

You should see:

Hello, World!

The screenshot shows the Visual Studio Code interface. The editor window displays a file named `hello.py` with the following content:

```
C: > Users > danis > Downloads > hello.py
1 print("Hello, World!")
```

The terminal window at the bottom shows the command `python -u "c:\Users\danis\Downloads\hello.py"` being executed, resulting in the output `Hello, World!`. The status bar at the bottom indicates the file is at line 1, column 23, using UTF-8 encoding with CRLF line endings, and the Python extension is active.

## ✓ Setup Complete!

You have successfully: - Installed Python - Installed VS Code - Configured Python extension - Run your first Python program ☐
